

## Maths

This week in Maths we are using money. Today set up your own shop.

Find toys or objects from around the house to sell in your shop. You will need to write your own labels for the items in your shop. Remember to use 'p' or '£' on your labels.

For the money you could:

- Use real money
- Make coins using paper/card
- Use small objects for money e.g. cheerios, pebbles

Remember to tell your customers how much they need to pay using the language related to money

e.g. "That will be 10p please"

To start with in your shop your customers could buy one item.

If you'd like more of a challenge, they could buy 2 or more items. Can you add together the prices to tell your customer how much they need to pay?
