

Introduction to today's learning follow this link: <https://youtu.be/K8lNZTOxgtk>

We are finding halves today. That means we need to divide (share) the amount into two equal groups.

We will investigate to see if all numbers can be halved.

Use these numbers to see if you can halve them or if there is a remainder (which means something left over)

6            9            12            23            15            36            54

Once you have investigated, you can sort the numbers into two columns like this:

Divides equally

Has a remainder
