

You are finding fractions of an amount and today it is length.
Watch the example <https://youtu.be/VTn60S5pEEU>

Draw a line 24cm long. Use a ruler carefully and remember to find zero to start measuring. You will need to use a double page in your book

Work out the answers to these questions. Then measure the amount on your line and label them $\frac{1}{2}$ $\frac{1}{4}$ $\frac{3}{4}$ $\frac{1}{3}$ $\frac{2}{3}$

1. How long is the line?
2. How long is half the line?
3. How long is three quarters of the line?
4. How long is a third of your line?
5. How long is two-thirds of your line?
6. How long would the line be if you doubled it? (You do not need to add this to your line)
