

Today you are learning number bonds to one hundred. Here are some bar models (part-whole)

You need to find the missing part to make 100. Remember you have the whole amount which is 100 and one of the parts. So you need to subtract the part from the whole to find the missing part.

| 100 | |
| 26 | |

This bar model tells us that the whole amount is 100 and part of the 100 is 26. So let's find the other part to make it 100 altogether.

We need to subtract (take-away) $100 - 26 = 74$ (because there is 74 left)
