

Sharing

18th May 2020

For today's Maths activity you need to start by making your own number cards from 1 to 20. Make sure they all look the same. Then choose a number card and count out that many of an object in your home, you could use lego, sweets or raisins (anything you have lots of). Then share out that number of objects with someone in your home. Make sure you both have the same number to make it fair. Repeat this activity at least 5 times. What do you notice about the numbers you've shared out? Is there a difference between sharing odd and even numbers?

Here is a video to help you <https://www.youtube.com/watch?v=xD3BKG12l6c>

Did I use an odd or an even number?
