

Maths

L.o- To compare and order objects by length.

Activity:

Choose 3 objects from around the house, can you put them in order, longest to shortest?

Remember this is different from height, we will be learning about height next week.

Remember that most of our learning in Reception is practical so this doesn't need to involve recording, however if you would like to do something in your books too, cut 3 different strips of paper (these could be decorated) and stick them in order.

Can you tell an adult which is the longest thing you found and which is the shortest?

Happy measuring!
