

L.O Count different representations up to 8

Think together

1 How many spots are there?

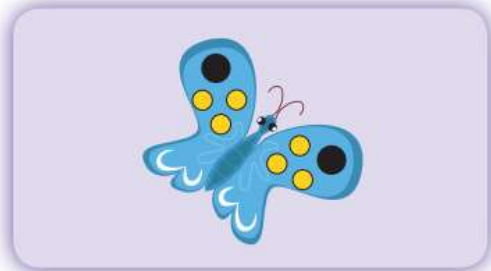

I will use ○.

- How many spots are there altogether? Can you point to each spot as you count? How many spots are on each side? Do you need counters to help you count?
- Can you count the number of spots without counting to them? Can you count in your head?

- In what way is this butterfly the same as the other one? Which spots are in the same place?
- Can you start counting at 6 and count on to find how many there are altogether? Can you show this on a 10 frame?
- How is this butterfly different? Does it matter that the spots are a different size and colour?

2 How many spots are there?

What's the same?
What's different?

How many different ways can you place 8 counters on your 10 frame?
